

# Where Next?

## Issues for Discussion

Barry S. Rosenstein, Ph.D.

- Additional investigators/medical centers
- Types of tissues to collect (blood, saliva, buccal swab etc.)
- Biomarkers in addition to SNPs (cytokines, RNA etc.)
- Data to collect; dosimetric and clinical follow-up
- Standardization of data collection; dosimetric and toxicity
- Training set (GWAS) and validation study
- Statistical methodologies to permit combining patients treated on different protocols
- Quality assurance
- Location of sample processing and storage
- Genotyping arrays; Affymetrix, Illumina etc.
- Bioinformatics tools; Haploview, PLINK, Eigenstrat, Partek
- IRB Issues; a uniform, general protocol and consent
- Funding; structure of R01s (disease site)
- Publish meeting summary
